Consultation on the Review and the Revision of Directive 2012/27/EU on Energy Efficiency

Fields marked with * are mandatory.

Introduction

This consultation aims to collect views and suggestions from stakeholders and citizens on the review and the revision of Directive 2012/27/EU on energy efficiency (Energy Efficiency Directive or EED), as partially amended in 2018 (Directive (EU) 2018/2002), foreseen by June 2021[1].

Energy Efficiency dimension of the Energy Union and the EED

Since the beginning, Energy Efficiency targets and policies have been one of the cornerstones of the EU Energy and Climate policy. Energy efficiency is one of the five dimensions of the Energy Union and will continue playing a key role in delivering the 2030 energy and climate framework supported by the governance process under the Governance Regulation[2]. In addition, Energy Efficiency First[3] has become a guiding principle of EU energy policy. To facilitate the operationalization of the principle, the Commission will issue a guidance.

The EED was adopted in 2012 to promote energy efficiency across the EU, to tap the existing energy saving potential with concrete measures, to remove barriers and overcome market failures that impede efficiency in energy supply and use in different sectors in order to achieve the EU headline energy efficiency targets for 2020.

The EED is part of the broader EU energy efficiency policy framework, which brings together other key instruments, such as the Energy Performance of Buildings Directive[4], as amended by Directive (2018/844/EU) (EPBD), the Energy Labelling Regulation[5] and the Ecodesign Directive[6].

The EED is part of the overall decarbonisation policy framework and is interlinked with other energy and climate policy areas, notably, the Renewable Energy Directive (RED)[7], the EU Emissions Trading System (ETS) Directive[8] and the Effort Sharing Regulation[9] (non-ETS sectors), and security of supply and internal energy market. The EU level energy and climate targets are linked together in the Governance Regulation, which requires Member States to prepare their integrated National Energy and Climate Plans (NECPs) for 2030. In these NECPs Member States set out their national contributions to the EU level targets and policy objectives, and the intended policies and measures to implement them.

The EED was subject to a first, limited revision in 2018[10] as part of the Clean Energy for All Europeans package[11]. This revision sets the EU headline energy efficiency target for 2030 of at least 32.5% and amended certain provisions[12], including adding a new requirement for a general review of the Directive and a possible, upwards revision of the target[13]. The transposition deadline for the amending Directive (2018/2002) was, in general on 25 June 2020, and, for Articles 9 to 11, on 25 October 2020.

The European Green Deal and the increased energy efficiency target for 2030

The Commission announced in the European Green Deal[14] that it would present an impact-assessed plan to increase the EU's greenhouse gas emission reductions target for 2030 to at least 50% towards 55% in a responsible way. The Commission also committed to "review and propose to revise", where necessary, the relevant energy legislation by June 2021", including the EED.

In the impact assessment[15] accompanying the Communication on the Climate Target Plan[16] adopted on 17 September 2020, the Commission examined the effects on the economy, society and environment of reducing emissions by 50% to at least 55% by 2030 (compared to 1990 levels). The assessment also considered the mix of available policy instruments and how each sector of the economy could contribute to these increased targets.

To this end and based on this impact assessment, the Communication on the Climate Target Plan puts forward an emissions reduction target of at least net 55% by 2030 as a balanced, realistic, and prudent pathway to climate neutrality by 2050. It also highlights that, to achieve this level of greenhouse gas emission reductions, there is a need to significantly step up energy efficiency efforts (to 36-37% for final and 39-41% for primary energy consumption) by 2030 from the current headline target of at least 32.5%.

The assessment of Member States' national contributions to the current headline target[17] shows insufficient level of ambition in terms of energy efficiency. The gap is equal to 2.8 percentage points for primary energy consumption and at 3.1 percentage points for final energy consumption.

Trends in energy efficiency

In terms of energy consumption, transport is the sector with the highest energy consumption accounting for 34% of final energy consumption in 2018. It is followed by industry and the residential sectors with both representing 25%, and the services' sector representing 13% of final energy consumption. The remaining sectors including, agriculture, fishing and forestry represent 3% of final energy consumption. Following a gradual decrease between 2007 and 2014, energy consumption has started to increase in recent years, and is now slightly above the linear trajectory for the 2020 targets. This is mainly due to weather variations, notably colder winters in 2015 and 2016, but also increased economic activity, low oil prices and increase in transport. Energy intensity in industry has continued to improve by as much as 22% between 2005 and 2017 and energy savings have indeed helped offset parts of the impact of these increases.

The latest assessment of progress for 2018 shows a decline of 0.6% in primary energy consumption compared to 2017[18], but this pace of reduction is insufficient to meet the EU target in 2020.

To address the growing energy consumption since 2014, the Commission set up a dedicated Task Force in the summer 2018 to mobilise Member States' efforts to reach the EU energy efficiency targets for 2020[19].

Partial and preliminary data for 2020 indicate that the impact on energy consumption of the COVID-19 crisis is significant and, as a result, the 2020 energy efficiency targets may well be met. However, these reductions are not caused by structural changes. Moreover, it was clear before the crisis that the level of energy efficiency efforts by Member States would not alone be sufficient to reach the 2020 targets. The sub-sequent recovery from the COVID-19 crisis is expected to lead to a return of energy consumption close to the pre-crisis levels.

Taking the above-mentioned elements into consideration and given the collective ambition gap of the national contributions proposed in the NECPs, the policies in place would have to be significantly increased in order to reach even the current 2030 targets

Review and the revision of the EED

The process will cover two elements:

1. The evaluation of those elements of the EED that were not revised in 2018.

2. The Impact assessment for a revision of the EED in view of meeting the increased 2030 GHG emissions reduction ambition.

Against this background, the Commission shall undertake a two-step process. As a first step, the evaluation will assess the existing framework of the EED since its entry into force in 2012[20], except for those elements already revised in 2018. It will assess whether the provisions are efficient, effective, and coherent with the broader EU legislative framework. It shall assess whether the EED is fit to overcome remaining regulatory and non-regulatory barriers, and market failures, whether there are some shortcomings, gaps and weaknesses for the existing measures or whether additional measures would be needed to deliver on their expected results.

The findings of the evaluation will then offer the basis for what needs to be streamlined, strengthened, added or changed in the EED in order (a) to address the remaining ambition gap to the 2030 EU energy efficiency targets and (b) to deliver the increased EU greenhouse emissions reduction target of at least 55% by 2030. The impact of these policy choices will be thoroughly analysed and the impact assessment will look at the impacts of the entire EED, irrespective of the articles that were revised in 2018.

The questions of this consultation are formulated to respect the requirements of the Better Regulation rules[21] and to support this two-step process of evaluation and impact assessment.

Part I – Questions of general nature

1. Assessing the implementation and the effectiveness of the Energy Efficiency Directive

Although the progress towards the achievement of the 2020 targets is still to be assessed, it is important to assess the effectiveness of the existing EED framework and to see how and to what extent the original objectives were achieved in the context of the proposed higher climate ambition of at least 55% net emissions reduction by 2030.

1.1 To what extent do you agree with the following statement?

"The original objectives of the EED - to increase energy efficiency across the EU and to remove barriers and market failures in energy supply and energy use - are still relevant"?

	Strongly disagree	Disag ree	Neither agree nor disagree	Agr ee	Strongly agree	No opinion
*Please select your answer		0	0	0		

Ple	ease explain your answer:		

1.2 To what extent has the EED attained its objectives – to increase energy efficiency across the EU and to remove barriers and market failures in energy supply and energy use?

	Not at all	To a little extent	To some extent	To a moderate extent	To a large extent	No opinion
*Please select your answer		0		0	0	

Please explain your answer:

The EU is reaching the goal for 2020 only thanks to COVID. Several MS are not reaching the goals.

1.2.A Which factors helped the most to achieve the objectives of the possible)	ne EED?	(muit	ipie o	puons	are	
 □ Binding nature of the measures of the EED (e.g. Article 5 on exe Article 7 on energy savings obligation, etc.) □ Significant flexibility left to Member States how to achieve various □ Existence of targets at the EU level □ Requirement to set national targets □ Requirement for planning policies and measures at national leve □ Wide scope of the EED covering both the energy supply and der actors (e.g. energy suppliers and distributors, transmission grid of enterprises and consumers) □ Strong monitoring and reporting framework at EU level □ Other (please specify) 1.3 To what extent could the below mentioned positive effects and associated with the EED since its entry into force in 2012? (use a result of the second se	s obligation	targe natio	nder t	he EE differe egulate	nt ma ors,	rket
very little extent and 5 = to a very large extent)			,			
	1	2	3	4	5	N o o pi ni o

*Greater availability of funding for energy efficiency investments	0					
*Energy efficiency policies triggered more jobs and growth	0	0				
*Energy efficiency led to an increased security of supply						
*Energy efficiency led to an increased security of supply *Energy efficiency led to lower energy bills	0	0	0	0		

1.4 To what extent could the below mentioned negative effects be associated with the EED? (use a rating scale of 1 to 5, where 1 = to a very little extent and 5 = to a very large extent)

	1	2	3	4	5	N o o pi ni o n
*Obligations under the EED led to higher administrative burden besides costs	0	0	0		0	0
*Obligations under the EED led to disproportionately higher costs	0					
*Enterprises have lost substantial revenues		0				
*Obligations under the EED led to flawed investment decisions						
*Obligations under the EED further complicated existing rules						
*Guidance on implementation of the EED from national authorities to enterprises and consumers was unclear		0	0		0	
*Obligations under the EED put strain on already limited national administrative resources		0	0		0	
*Obligations under the EED led to too diverging implementation across Member States	0	0	0	0		0
*The benefits of the EED were unequally distributed among the population.	0	0	0	0	0	0

Please explain what administrative burden you perceive:

additional reporting, different interpretations in different Member States

*1.5 Which measures stemming from the EED have been the most successful in your country in
terms of energy savings and other benefits? (multiple options possible)

ms	of energy savings and other benefits? (multiple options possible)
	Energy efficiency obligation schemes introduced to achieve annual energy savings among final customers
	Obligation for public authorities to renovate buildings owned and used by the central government
	Obligation for public authorities to purchase only products, services and buildings with high energy-efficiency performance
	Obligation for large enterprises to carry out regular energy audits to learn about their energy consumption profile and identify energy saving opportunities
	Support provided to small and medium-sized enterprises to carry out energy audits to learn about their energy consumption profile and identify energy saving opportunities
	Measures introduced on awareness raising of energy efficiency and promoting change of consumer behaviour
	Deployment of individual meters and obligation to provide consumers with better and more frequent information about their energy consumption
	Introduction of subsidies, support schemes and fiscal incentives for energy efficiency
	Increased efficiency in energy production/conversion, transmission and distribution
	Introduced measures to address regulatory barriers or split incentives in national legal frameworks or administrative practices

✓	None of the above
	Other (please specify)

1.6 To what extent has the EED stimulated energy efficiency efforts in the following sectors?

(1 = to a very little extent and 5 = to a very large extent)

Please explain your answer:

1.12 In your view, does the EED have positive synergies with the Energy Performance of Buildings Directive? If yes, what are those?
○ Yes
○ No
No opinion
Please explain your answer:

*1.13 To what extent has the EED contributed to an optimisation of the overall energy system (higher system efficiency)?

1,000 character(s) maximum

Having a specific target for energy efficiency in EU's goals has highlighted its value and thereby contributed to an optimisation of the overall energy system. However, it has to be pointed out that, in essence, the EED (and RED) constrains the policies and measures Member States and companies can take to reach various emission targets. They do not improve flexibility, they reduce it.

*1.14 What are the main lessons learned from the implementation of the EED?

1,000 character(s) maximum

The EED should be interpreted similarly in different Member States. The current situation leads to inefficiency and forms a barrier for EU-wide business.

* 1.15 What is missing in the EED?

1,000 character(s) maximum

-	
Incen	tives

2. Assessing possible options for revising the Energy Efficiency Directive (EED) in view of contributing to the 55% climate target for 2030 and addressing the ambition gap in the final NECPs

The impact assessment supporting the 2030 Climate Target Plan concluded that a contribution at the level of 36-37% for final energy consumption and 39-41% for primary energy consumption by 2030 would be required.

Therefore, the Commission has launched the EED revision process. The revision would reflect on the need to increase energy efficiency efforts to match the level of ambition of a higher 2030 climate target and would also aim to strengthen those parts of the EED, which could address the remaining ambition gap for energy efficiency in the NECPs, to ensure the achievement of the current level of the EU energy efficiency target for 2030. In addition, the revision will be vital to contribute to the implementation of the other European Green Deal Initiatives[22]. This is particularly relevant especially in the context of actions identified in the Commission's Recovery Plan[23], which need to be reflected in the national Recovery and Resilience Plans.

The EED revision also offers the important opportunity to address any shortfall in its effectiveness and efficiency. A notable case relates, for instance, to the need for a more consistent application of the Energy Efficiency First principle. Another important area is the need to address any outstanding regulatory and non-regulatory barriers for additional energy savings and emissions reduction throughout all economic sectors.

In this context, the revision of the EED will also have to consider whether the EED sufficiently addresses emerging opportunities and needs for energy efficiency improvements in sectors like ICT sector, as well as agriculture and water.

In addition to the results of the evaluation of the Directive, the impact assessment of the 2030 Climate Target Plan and the Commission assessment of the final NECPs will feed into formulation of policy options to identify which elements of the EED – and to what extent – need to be amended, and what needs to be added to achieve the objectives outlined above.

	you agree that energy efficiency should play a key role in delivering a higher climate on (of at least 55% net) for 2030 and in view of achieving the EU's carbon neutrality by 2050?
	Agree
	Neutral
	Disagree
	No opinion
Please	e explain your answer:
	ven the suggested increase in energy efficiency efforts by 2030, which instruments of general should be considered to achieve the higher energy efficiency ambition? (multiple options le)
	Making the "Energy Efficiency First" principle* a compulsory test in relevant legislative, investment and planning decisions
	Strengthening the EED requirements
	Setting a higher energy efficiency target at EU level for 2030
	Setting energy efficiency targets in specific sectors of the economy
	Stronger focus on implementation and on enforcement of the existing legislation at national and EU level
	Stronger focus on life-cycle efficiency and circularity.
	The EU should provide additional technical support to Member States
✓	Stronger focus on fiscal measures and incentives including through carbon pricing.
	Stronger focus on awareness raising of energy efficiency and behavioural change
✓	Other (please specify)
* Energy	Efficiency First (in line with Article 2(18) of the Regulation (EU) 2018/1999), means taking utmost account in energy planning, and in

refigive Energy Efficiency First (in line with Article 2(18) of the Regulation (EU) 2018/1999), means taking utmost account in energy planning, and in policy and investment decisions, of alternative cost-efficient energy efficiency measures to make energy demand and energy supply more efficient, in particular by means of cost-effective end-use energy savings, demand response initiatives and more efficient conversion, transmission and distribution of energy, whilst still achieving the objectives of those decisions.

^{*}If you selected 'other', please specify here:

We note that energy efficiency of Waste-to-Energy plants is inadequately addressed today. Higher energy recovery from WtE-plants is possible and should be promoted in the EU in order to reduce reliance on fossil energy.

Yes No No opinion Please explain your answer: Rather than significantly increasing the targets that have already proven difficult to achieve, the EED could be enhanced qualitatively. Please explain your answer:

Waste-to-Energy has unused potential

2.8 Should the following measures be considered to achieve a higher ambition?

(use a rating scale of 1 to 6, where 1 = strongly disagree and 6 = strongly agree)

	1	2	3	4	5	6	N o o pi ni o n
*Strengthening the renovation obligations for public buildings	0	0	0	0	0	0	
*Strengthening energy efficiency requirements for public procurement	0	0	0	0		0	0
*Requiring that local authorities (above a certain size) develop an energy efficiency action plan with measurable impact indicators	0	0	0	0		0	0
*Requiring that large enterprises implement certain energy efficiency improvements identified in energy audits	•	0	0	0	0	0	0
*Requiring that small and medium-sized enterprises are offered free energy audits		0	0	0	0	0	0
*Extending the requirement on frequent consumption information from electricity and thermal energy to also cover gas and roll-out remotely readable gas meters	0	0	0		0	0	0
*Establishing sector specific goals or measures addressing sectors for which the energy efficiency potential is higher (e.g. services, data centres, energy-intensive industries)	0	0	0	0		0	0
*Strengthening the requirements for efficiency in energy transformation, transmission and distribution		0	0	0	0	0	0
*Strengthening the requirements for using energy performance contracting in renovation of public buildings	0	0	0	0	0	0	
*Introducing or extending fiscal measures and incentives, including carbon pricing and energy taxation	0	0	0	0	0		0
*Other (please specify)		0		0		0	

Please explain your answer	
----------------------------	--

2.9 Should the following measures in the heating and cooling policy area be considered in order to achieve more effectively the decarbonisation objectives?

(use a rating scale of 1 to 6, where 1 = strongly disagree and 6 = strongly agree)

	1	2	3	4	5	6	N o o pi ni o n
*Member States should introduce specific energy efficiency targets for the heating and cooling sector to ensure that energy consumption in this sector is sufficiently taken into account	0	0	0	0		0	0
*Fossil fuels in heating systems (in buildings and district heating) should be gradually phased out with a faster phasing out of the most polluting ones		0	0				
*Fossil fuel heating system should be banned for new buildings whenever technical feasible		0	0	0	0	0	
*Member States should unbundle the management of the generation and distribution heat network		0	0	0	0	0	0
*Allow public support for heating systems only to non-fossil fuel technologies	0	0	0	0	0		0
*The recovery of waste heat from heating and cooling (air- conditioning) systems in individual buildings should be promoted		0	0		0		
*Specific requirements for utilization of waste heat and waste cold should be set for industry and services	0	0	0	0	0	0	
*Requiring district heating and cooling operators to prepare long-term plans to improve their energy efficiency in terms of primary energy intensity energy		0	0		0		
*Member States should facilitate local and district approaches to policy and infrastructure planning and development in heating and cooling	0	0	0	0	0		
*Other (please specify)							

Please explain your answer:

Fossil fuels should be phased out with carbon pricing in the existing infrastructure. Performance standards should be set for new infrastructure.

2.10 Can the following principles ensure overall consistency of energy efficiency and renewable energy as key policies for decarbonisation?

(use a rating scale of 1 to 6, where 1 = strongly disagree and 6 = strongly agree)

	1	2	3	4	5	6	N o o pi ni
*Having distinct energy efficiency and renewable targets is the best avenue to decarbonisation.		0	0	0	0	0	n
*Member States' progress towards decarbonisation targets should be the primary indicator to assess the renewables and energy efficiency policies and measures.	0	0	0	0		0	
*Member States need to progress on both energy efficiency and renewables to reach their decarbonisation targets.	0	0	0	0	0	0	
*Non-binding nature of national renewable and energy efficiency targets allows Member States to choose cost-efficient decarbonisation paths.	0	0		0	0		
*Energy efficiency policies and measures should be prioritised where fossil-based energy solutions are currently used.	0	0	0	0	0	0	

*2.11 How could synergies between the EED and the Renewables Energy Directive be strengthened in the future?

1,000 character(s) maximum

Fossil fuels could be banned in performance standards for new infrastructure (buildings, industry).

*2.12 How could synergies between the EED and the Energy Performance of Buildings Directive be strengthened in the future?

1,000 character(s) maximum

Fossil fuels could be banned in performance standards for new infrastructure (buildings, industry).

*2.13 How could synergies between the EED and the Emission Trading System (ETS) be strengthened in the future, especially in the context of a possible extension of the ETS?

1,000 character(s) maximum

Energy efficiency can be enhanced also through the price signal of the EU ETS

*2.14 How could synergies between the EED and the Effort Sharing Regulation be strengthened in the future?

1,000 character(s) maximum

As ESR targets are enhanced, Member States need more flexibility - not less

	(s) maximum
Support to	energy efficiency entrepreneurship
2.16 The "Energy	y Efficiency First" principle is established in energy legislation to contribute to a
	ficiency ambition. Which measures in your view could be implemented to ensure onsistently applied? (multiple options possible)

If you decide to end the survey here, we thank you very much for your valuable contribution.

O No

Part II – Technical questions on specific Articles of the Energy Efficiency Directive

The EED lays down a set of measures aimed to step up Member States' efforts to use energy more efficiently at all stages of the energy chain – from the transformation of energy and its distribution to its final consumption - and those are as follows:

- Articles 1 & 3 (energy efficiency targets) sets the EU headline energy efficiency targets for 2020 (of 20%) and for 2030 (of at least 32.5%) and Member States have to set their national indicative targets and indicative contributions in view of achieving those headline targets for 2020 and 2030 respectively. Member States shall report annually on the progress towards their national indicative energy efficiency targets and submit National Energy Efficiency Action Plans ('NEEAPs) every three years, starting from 2014. For the headline EU 2030 target, Member States shall fulfil the planning and reporting obligations under the Governance regulation (set their national contributions towards the EU 2030 target and define the national measures to fulfil those contributions in the National energy and Climate Plans to be submitted to the Commission by end 2019.
- Article 5 (exemplary role of public bodies' buildings) requires that Member States renovate 3% (or implement alternative measures resulting in equivalent savings) of their central government buildings of over 500 m² which do not meet the cost-optimal energy efficient standards. This threshold dropped to 250 m² as of 9 July 2015.
- Under Article 6 (purchasing by public bodies) central governments have the
 obligation to purchase energy efficient products, buildings and vehicles, and Member
 States should encourage public bodies of local and regional government do so as well.
 This Article was evaluated in 2016[24], however the findings were not conclusive given
 that the implementation had just started and it was too early to assess the impact[25].
- Article 7 (energy saving obligations) sets an obligation on Member States to achieve new energy savings each year (of 1.5% of the annual energy sales for the period 2014-2020 and of 0.8% (0,24% for Malta and Cyprus) of the final energy consumption for the period 2021-2030) by putting in place an energy efficiency obligations scheme or other policy measures. Article 7 is responsible for about half of the energy savings the EED is expected to deliver. As mentioned above, this Article was amended as part of the focused EED review in 2016 (amending Directive EU/2018/2002). Under
- Article 8 (energy audits and energy management systems) Member States must ensure that large companies have their first energy audit by 5 December 2015 and then every four years. The review of the implementation of the definition of small and medium size enterprises for the purposes of Article 8(4) is carried out in a separate process (in line with the amended Article 24(12)).
- Articles 9 to 11 (metering and billing) provide requirements for metering and billing of energy use. As mentioned above, those Articles were already amended as part of the focussed EED review in 2016 (amending Directive EU/2018/2002) by adding new, more precise and specific provisions applicable for thermal energy (heating and cooling)[26]. Electricity related provisions were transferred to the recast Electricity Directive (EU) 2019/944. For an overview and a detailed discussion of the changes made please refer

EUSurvey - Survey

- to Commission Recommendation (EU) 2019/1660 of 25 September 2019 on the implementation of the new metering and billing provisions of the Energy Efficiency Directive 2012/27/EU[27].
- Article 14 (promotion of efficiency in heating and cooling) requires that Member States promote efficiency in district heating and cooling systems and carry out comprehensive territory-wide assessments of the potential for efficient heating and cooling by 31 December 2015 which should be resubmitted again by 31 December 2020 (on basis of the updated methodology and the amended Annex VIII and part of Annex IX)[28]. It also requires individual cost-benefit analysis to be carried out in the context of the planning and permitting of certain types of installation (thermal electricity generation, industrial installations, district heating and cooling network), in order to assess the potential benefits of high-efficient cogeneration installation or utilising waste heat from nearby industrial installations(Art. 14(5) and 14(7)).
- Article 15 (energy transformation, transmission and distribution) requires that
 Member States ensure that energy efficiency is taken into account in energy
 transformation, transmission and distribution and contains specific provisions to this end.
 Certain of these (parts of Art. 15(5) and Art. 15(8)) were removed as part of the focussed
 revision in 2018 and replaced with consolidation provisions in the new Electricity Market
 legislation.
- Article 16 (on qualifications and accreditation schemes for providers of energy services and energy audits) had a later transposition deadline than the rest of the Directive (31 December 2014) and it is also closely linked to the implementation of Articles 17 and 18.
- Under Article 17 (information and training) Member States shall ensure that information on available energy efficiency mechanisms and financial and legal frameworks is widely disseminated to all relevant market actors. The effectiveness of the implementation of this Article was assessed in 2017[29]. The findings of the assessment showed that while most of the Member States have put in place information and awareness raising measures, it is hard to assess their impact on the uptake of energy efficiency improvements and investments due to lack of robust monitoring results and ex-post evaluations.
- Member States are required to promote the energy services market under Article 18
 (energy services) with a particular focus put on supporting the public sector including
 through the use of energy performance contracting. A number of reports to assess
 progress of energy service markets in the EU including the uptake of the energy
 performance contracting have been carried out by the JRC in the framework of an
 administrative arrangement with DG ENER.
- Article 19 (other measures to promote energy efficiency) requires the Member States to take action to remove regulatory and non-regulatory barriers to energy efficiency and to report on this to the Commission as part of their first National Energy Efficiency Action Plan (NEEAP). Progress made by Member States in relation to Article 19(1) was assessed on basis of the notified NEEAPs 2014 and 2017 and a report was published in 2019[30].
- Article 20 (Energy Efficiency National Fund, financing and technical support)
 provides that the Member States shall facilitate the establishment of financing facilities
 and that they may set up an Energy Efficiency National Fund. This Article was amended

- in the focussed EED review by adding additional requirements for the Member States and the Commission (providing guidance on how to unlock private investments).
- Article 21 on the conversion factors set out in Annex IV was amended for the purposes of reviewing the default coefficient primary energy factor for electricity generation (in footnote 3) and which should be again reviewed by 25 December 2022 (as required by amending Directive EU/2018/2002). Article 24 (review and monitoring of implementation) contains reporting obligations for the Commission (while the reporting obligations for the Member States have been transferred to the Governance Regulation, (EU)2018/1999). This Article thus has been partially amended to ensure the coherence with the Governance framework and the amendments of Articles 3 and 7, and it is thus specifically targeted in this consultation.

Article 1 and 3 - Energy efficiency targets

haut war. What is warm field of amounties?

3.1 How do you assess the level of ambition of the existing EU energy efficiency targets? (too high - adequate level - too low)

	Too high	Adequate level	Too low	No opinion
For 2020 targets			0	
For 2030 targets	0		0	0

3.2 Could you please give your opinion on the current aspects of the Union's energy efficiency targets for 2020?

(Appropriate – Not appropriate – Difficult to say/ No opinion)

	Approp riate	Not appropriat e	Difficult to say	No opinio n
The nature of the target is not specified (whether it is binding or indicative)			0	0
Indicators used for defining the target: primary or final energy consumption		0	0	0
Same level of ambition for both primary and final energy consumption	0	0	0	•

	Definition of the baseline (2007 Reference Scenario rojections for 2020)	0	0		0		
С	Clarity of the target	0	0				
Pleas€	e explain your answer here (optional):						
	ould you please give your opinion on the following	aspects o	of the natio	nal ei	nergy e	efficien	су
_	s for 2020? opriate – Not appropriate – Difficult to say/ No opinion)					
		,		Α			N
				p pr o pr iat e	Not app ropr iate	Diff icul t to sa y	o o pi ni o
Ca	approaches for setting national targets are not prescrib an chose the methodology and indicators for setting the primary/ final energy consumption, savings or intensity	heir target(0		0	0
lr	ndicative nature of national targets (no sanctions for n	on-complia	ınce)				
	lo reference values/formula at EU level for assessing mbition	the level of	f national		0	0	0
N	lo need to set intermediate milestones/ trajectory to ta	rgets				0	0
Р	ossibility to revise the national targets						0
.4 Ha	e explain your answer here (optional): as the EED provided the right monitoring and enfo y efficiency targets? Yes No	rcement n	nechanism	s to a	chieve	nation	al
	No opinion						
યેeas∈	e explain your answer:						
Articl	le 5 – Exemplary role of central government	building	s				
3.5 Ha	es the EED made central government buildings in y	your coun	try more er	nergy	efficie	nt?	

No opinion

Please explain your answer:
3.6 What are the main factors limiting central government in effective and efficient renovation of its buildings (multiple options possible)?
Insufficient enforcement of the regulatory framework in my country
Insufficient national budget earmarked for renovation
 Requirement to renovate can be achieved by alternative measures that are not clearly defined and are hard to monitor
Requirement to renovate does not apply to rented buildings and central government authorities often rent their buildings
Other (please specify)
3.7 How do you assess the current 3% annual goal on renovation of central government's buildings in line with Article 5?
The 3% goal is too low and does not go beyond the standard rate of renovation
The 3% goal is at an adequate level to promote renovation of central government's buildingsThe 3% goal is too high
Other (please specify)
3.8 Given that additional energy efficiency efforts are needed, how could Article 5 be made more
effective? (multiple options possible)
 The obligation to renovate public buildings should be extended to regional and local authorities The obligation should be extended to include buildings simply occupied by the central government The obligation should be extended to include buildings simply occupied by the central, regional and local public authorities
The obligation should target specific type of public buildings, such as schools and hospitals
 The required floor area to be renovated each year should be higher than 3% of all public buildings The obligation shall require deep renovations in order to reach higher than minimal energy standards Minimum energy performance requirements for owned and rented public buildings should be
introduced
Minimum levels of renewable energy use should be introduced
 Public authorities should be required to adopt an energy management system and track buildings performance
Wider approaches to achieving sustainable built environment (such as circular economy
considerations) should be better considered for public buildings renovations Other (please specify)
Article 6 – Purchasing by public bodies
3.9 Has the requirement for central governments to purchase only products, services and buildings with high energy-efficiency performance helped to develop a market for energy efficiency products
with high energy-emiciency performance helped to develop a market for energy emiciency products and services in your country?
○ Yes
○ No

)21	EUSurvey - Survey
	No opinion
Pleas	e explain your answer:
	Given that additional energy efficiency efforts are needed, how could Article 6 be made more tive? (multiple options possible)
	The energy efficiency requirement in public procurement should be extended to all levels of public administration (including to regional and local authorities)
	Requirements on reporting on energy used during the whole lifetime of procured goods and buildings should be gradually introduced
	A mandatory calculation of total cost of ownership shall be introduced for public procurement The references to limiting conditions (e.g. cost-effectiveness, economic feasibility, technical suitability) should be removed
	Other (please specify)

Article 7 – Energy Savings Obligation

3.11 Taking into consideration the required higher energy efficiency efforts for 2030, how do you assess the current level of ambition of Article 7(1) on energy savings obligation? (too high - adequate level - too low)

	Too high	Adequate	Too low	No opinion
Please select your answer			0	0

3.12 What elements of Article 7 should be addressed to ensure the higher level of energy efficiency for 2030 (ranking the measures by using the scale 1-6, 1 – not important and 6 – very important; or No opinion)

	1	2	3	4	5	6	N o o pi ni o
Increase the ambition level of energy savings obligation for 2021-2030			0		0		
Strengthen the additionality criteria for existing tax measures							
Make the EEOS a mandatory instrument in all Member States							
Require Member States to set a certain level of energy savings to be achieved in building renovations	0	0	0	0	0	0	0
Require Member States to set a certain level of energy savings to be achieved in transport	0	0	0	0	0	0	0
Strengthen the monitoring and verification rules	0		0	0	0	0	0

Require Member States to target specific sectors with policy measures under Article 7			0		0		
Set mandatory requirements to implement a specific share of policy measures to alleviate energy poverty	0	0	0	0	0	0	
Other (please specify)			0		0	0	

Article 8 – Energy audits and energy management systems

3.13 Current rules oblige enterprises that are not small or medium-sized to carry out every four years an energy audit to learn about their energy consumption profile and identify energy saving opportunities. Should these rules be changed?

Yes

O No

No opinion

Please explain your answer:

The interpretations in different Member States are too different

3.13.A Would the following option address the shortcomings you have observed (select one answer for every option)?

Obligation to carry out energy audits should:	l fully agre e	I a gr e e	N e ut ra	l dis agr ee	I fully disagr ee	No opin ion
depend on energy consumption and not size or ownership						0
depend only on size of the enterprise but not on who owns it		0				
depend both on energy consumption and on size						
be made more frequently than every four years		0	0			
be accompanied by an obligation for enterprises to implement certain measures identified in energy audits	0		0	0	0	0
be accompanied by a requirement to disclose non- sensitive information from energy audits	0	0	0			0
include recommendations for utilising renewable energy			0	0	0	0
Include recommendations on resource efficiency			0	0	0	0

Articles 9-11 - Metering for gas

3.14 To what extent has the EED contributed to final customers being informed of actual gas consumption and costs properly and frequently enough to understand what drives their consumption and make informed choices about possible energy saving measures? Contributed to a large extent										
Contributed to a large extent										
Contributed to some extent										
Oid not contribute										
○ I do not know										
Please explain your answer:										
definitions										
3.15 Have the requirements under Article 14 increased energy efficiency in the heating and cooling sector in your country?										
3.15 Have the requirements under Article 14 increased energy efficiency in the heating and cooling sector in your country? Yes										
sector in your country?										
sector in your country? O Yes										
sector in your country? Yes No										
sector in your country? Yes No No opinion										

(please rank: Very high – High – moderate – Low – Very low)

	Very high	Hi gh	Moder ate	Lo w	Very Iow	No opinion
It increased energy efficiency of energy supply			0		0	0
It increased energy efficiency of heating and cooling networks	0	0			0	0
High-efficiency cogeneration was more often deployed					0	
Efficient district heating and cooling was more often deployed					0	
Increased reuse of waste heat from industry	0	0	0		0	0
It increased reuse of waste heat from services (including ICT)	0	0	0			

3.17 Given that additional energy efficiency efforts are needed, how could Article 14 and related Annexes and definitions (Article 2) be made more effective? To what extent do you agree that the following measures should be implemented

(use a rating scale of 1 to 6, where 1 = strongly disagree and 6 = strongly agree)

	1	2	3	4	5	6	N o o pi ni o n
Minimum requirements for efficient district heating and cooling should be strengthened;	0	0	0	0		0	0
Minimum requirements for efficient district heating and cooling should be established separately for networks and generation units;	0	0	0	0		0	0
Minimum requirements for high-efficiency cogeneration should be strengthened;	0		0			0	
Minimum requirements for high-efficiency cogeneration using fossil fuels should be stricter;	0	0	0	0	0	0	
The Comprehensive assessments in line with Article 14(1) should explicitly cover renewable energy potentials in heating and cooling;		0					
The requirement to address the potential identified in the Comprehensive assessments through policies and measures should be strengthened;		0					
The requirements for a cost-benefit analysis in line with Article 14(5) should be based on primary energy savings;	0	0	0	0		0	0
Member States should better ensure that costs and benefits of more efficient heating and cooling supply are taken into account in infrastructure and investment planning and permitting;	0	0	0	0		0	0
Planning and permitting of infrastructure generating waste heat or cold should take into consideration geographical proximity of a potential demand (heat sink) for this energy;	0	0	0	0		0	0
Member States should introduce specific energy efficiency indicators for district heating and cooling to ensure that operators improve energy efficiency of their generation and reduce network losses;	•	0	0	0	0	0	0
Other (please specify).	0	0	0	0			

3.18 Which of the following measures would be important to increase energy efficiency of data centres? (select one answer for each option)

Rules should ensure that:	Very import ant	Important to some extent	Not import ant	No opini on
large data centres are encouraged to be located where their waste heat can be used		0	0	

the potential for waste heat reuse is assessed when new data centres apply for planning permissions existing provisions to exploit industrial waste heat				
existing provisions to exploit industrial waste heat		\bigcirc		
potential are strengthened	0	0		•
