

Bio-CO₂ Use and Removal 2024

April 16th, 2024, Kulttuurikasarmi, Helsinki, Finland

The Bio-CO₂ Use and Removal 2024 event aims to promote understanding of the different alternatives and conditions for technological carbon removal, as well as for the utilisation of biogenic carbon dioxide in different products. Additionally, the event highlights the overall significance of these solutions in climate policy and the specific requirements for the implementation of the concrete projects.

The event will be a common discussion and networking forum for all types of stakeholders related to capture, utilisation, logistics, and storage of biogenic carbon.

The event is organised by the Bioenergy Association of Finland in collaboration with VTT Technical Research Centre of Finland and Finnish Energy.

It is expected that the seminar will be attended by 140 representatives.
